EVENT: Web Development Bootcamp

ORGANISED BY:

AIML Student Association, A.P. Shah Institute of Technology, Thane

DATE & TIME: 23-25 February 2026,
10:00AM to 1:00 PM

VENUE:

Room no. 405

TARGET AUDIENCE:

Students from the Department of Artificial Intelligence & Machine Learning (AIML)

INTRODUCTION: To encourage students to explore this field and gain hands-on experience, the AIML Student Association of A. P. Shah Institute of Technology, in collaboration with Coding Nexus, organized a 3-Day Web Development Bootcamp. The bootcamp aimed to provide students with a structured learning experience covering fundamental concepts, project development, and practical implementation through a competitive challenge.

OBJECTIVES:

The primary objective of the bootcamp was to provide students with practical exposure to modern web development technologies. The event aimed to help students understand the architecture of web applications, build a functional project, and apply their knowledge through a competitive challenge.

The program was designed for students of all skill levels and encouraged them to explore full-stack development concepts while gaining hands-on experience.

EVENT FLOW:

Day 1 – Learn

The first day focused on introducing participants to the fundamentals of web development. Students were taught the difference between frontend and backend development, the MVC architecture model, and an overview of the MERN stack. This session helped participants understand the structure and workflow involved in building modern web applications.

Day 2 – Build

On the second day, participants worked on developing a web project based on the concepts learned previously. The session focused on integrating different components and implementing the project step by step. This hands-on learning approach enabled students to understand how theoretical concepts translate into practical applications.

Day 3 – Implement

The final day consisted of a live project challenge where participants were required to implement and present their solutions. This activity encouraged students to apply their knowledge, think critically, and compete in a technical environment. Winners were selected based on creativity, functionality, and implementation.

WINNERS:

1st Place:

Ojas Walke

2nd Place:

- Mayuresh Kashinath Nikumbh
- Aarya Prabhakar Nichal

KEY TAKEAWAYS:

The bootcamp successfully enhanced participants' understanding of web development and provided valuable hands-on experience. Students were able to build functional projects and gained confidence in implementing modern web technologies. The competitive challenge also encouraged innovation, teamwork, and practical problem-solving skills.

CONCLUSION: The Web Development Bootcamp proved to be a highly beneficial initiative by the AIML Student Association in collaboration with Coding Nexus. The event provided students with a structured learning experience and motivated them to explore web development further. The enthusiastic participation and successful execution of the bootcamp reflected the growing interest of students in technical skill development.

The association looks forward to organizing more such lively events in the future.
